howarddavis773@gmail.com | May Pen, Clarendon | (876) 345-4148

EDUCATION

University of Technology, Jamaica

2025-Present

B.Sc. Computing (GPA: 3.58/4.0)

Recipient, STEM Scholarship

Central High School

2018-2025

GPA: 3.3(Hons)

Acquired seven (7) CSEC Subjects

Acquired four (7) CAPE Subjects

Acquired Two (2) City & Guild Certificates

PROFESSIONAL EXPERIENCE

Summer Internship – Summer Hope Program

July 14 – 31, 2026

Central High School

- Managed the complete of new and return students registration intake process for 100+ students, receiving, reviewing and scanning documents.
- Compiled City & Guilds subsidy sheets of 200+ students and preparing complete physical files.

Central High School

July 14 – 31, 2025

- Verified, scanned, and uploaded 100+ student enrolment documents into the school's digital database.
- Reorganized enrolment records for 100+ students, bringing order to a disorganized filing system and ensuring all documentation met school registration requirements.
- Brought the same attention to detail and sense of initiative to every task, regularly identifying what needed to be done and completing it without waiting to be asked.

SKILLS

Technical Skills:

Microsoft Office (Excel, Access, Word), Git, VSCode, Android Studio, Jetpack Compose.

Programming Languages:

C, Python, Kotlin.

PROJECTS

Automated Workforce Administration and Statutory Payroll Processing

- Created a dual language system architecture incorporating a C based management layer for CRUD operations and a Python backend for automated bi-weekly payroll generation.
- Built data pipeline capabilities that would read and parse structural CSV files into local dictionaries, thereby bypassing the need for manual data entry.

Real-Time Bus Routing & ETA System

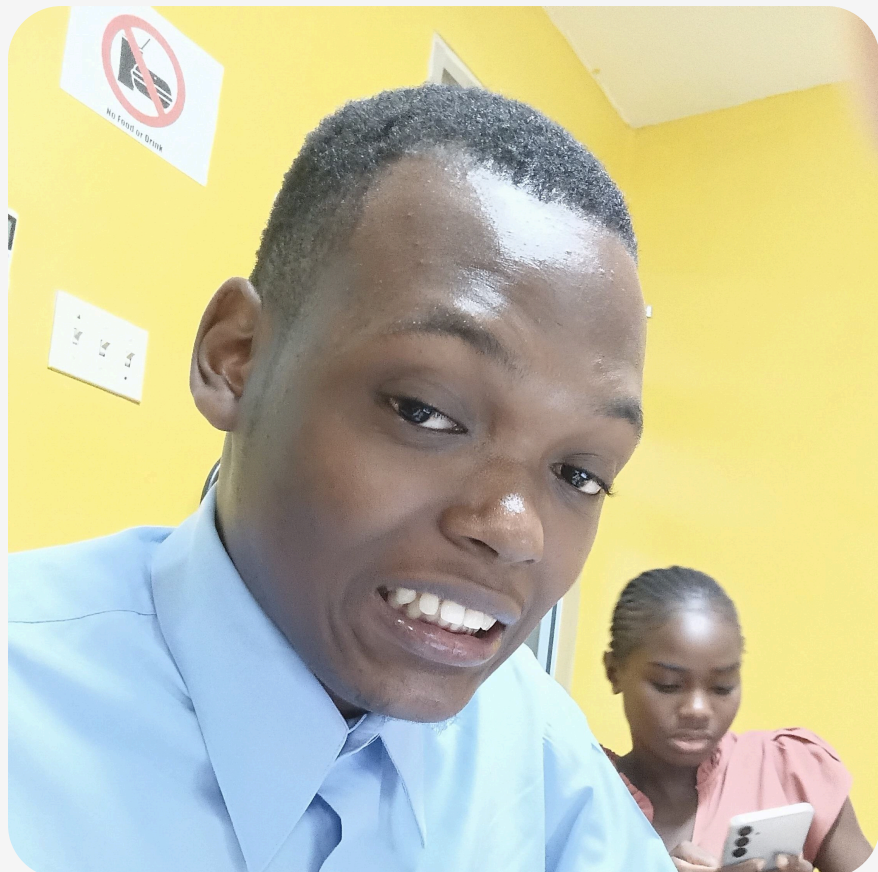

- Developed an entire bus station terminal, depends on the end user's selected route, provides bus on that route and give a travel time estimate.
- Utilizes HTTPS location APIs to calculate optimal routes, incorporating live traffic metrics to generate precise distance and ETA predictions for end users.

Very curious about the programming world and enjoy learning about how technology (as it provides a sense of satisfaction)???. My current focus is Android development using Kotlin and the Jetpack Compose framework. My curiosity motivates me to explore new programming concepts, experiment with different ideas, and understand how applications are developed. Academically, this encourages me to go beyond simply completing assignments because I often want to understand the reasoning behind what I am learning.

**Possible Song:** Dead Man Blue, Window Shopper, Kante, Lazurus, Revolution, Live a little-Bob Marley, one chronixx song, somewhere wonderful, dream-fleetwood mac, I'm not a king

Music lover, I listens to a wide range of genre, a few a which are: Reggae, Dancehall, Pop, Country, Blues and Rock. Music provides me with a way to relax and take a break from academic responsibilities and help me return to my studies feeling refreshed and focused.

# Tony Stark

Tony Stark is a genius inventor and billionaire industrialist, who suits up in his armor of cutting-edge technology to become the super hero Iron Man who uses his intellect and technology to protect the world.

## Why Tony?

His ability to push through despite impossible constraints and past mistakes, his resourcefulness and endless creativity, are what place him above the rest. One is his invention, JARVIS (Just A Rather Very Intelligent System), an AI assistant that has the ability to control the automation, security, and daily operations of Tony Stark's mansion and tower. Seeing his interaction with JARVIS has always inspired me to create an AI assistant of my own.

**Quote:** Sometimes you gotta run before you can walk.

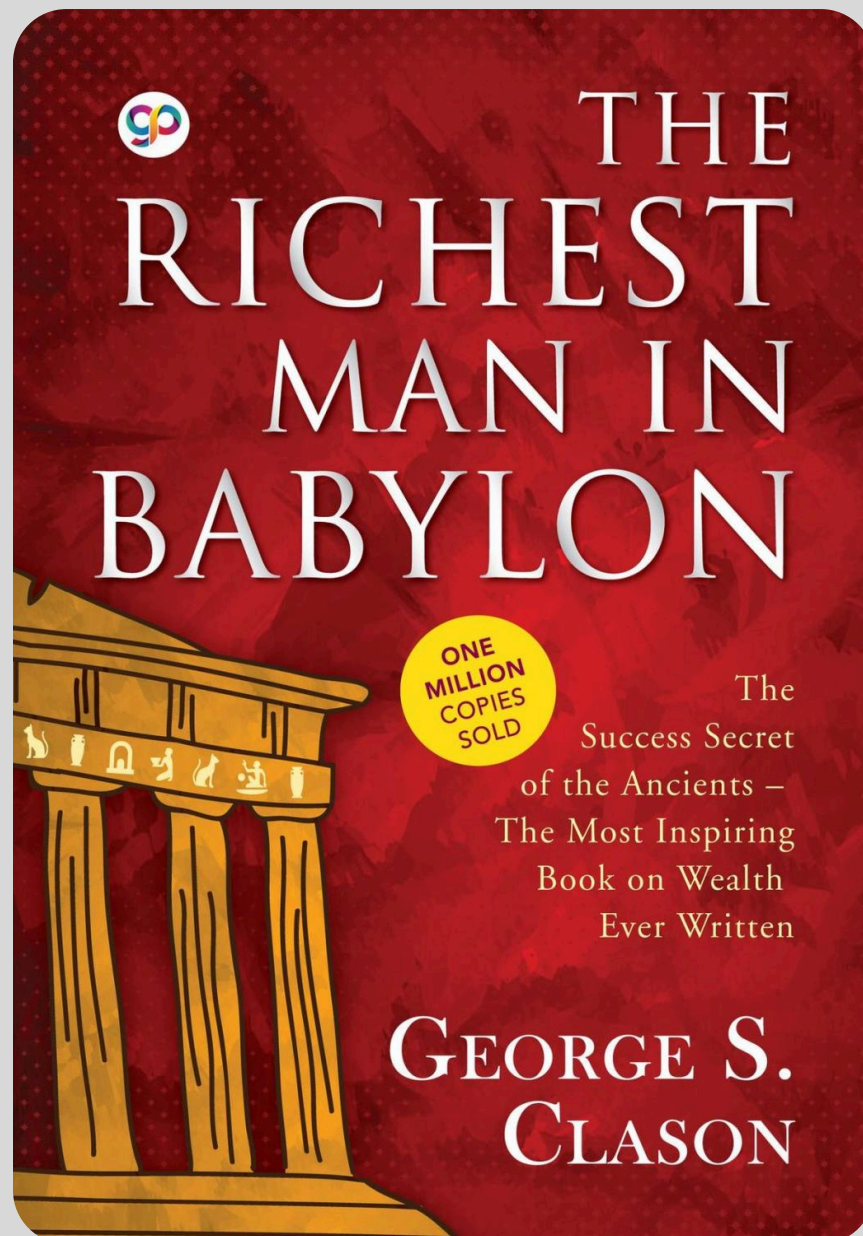

**Interpretation:** To sometimes attempt tasks requiring a higher level of expertise, you learn the fundamentals or do simpler tasks.

# AI as a Tool?

AI acts as a tool that can quickly provide solutions to difficult problems and summary information without having to spend minutes manually scouring the internet, textbooks, or other sources. Leaving additional time for students to better understand the principle behind the solution and apply their knowledge in practice. In addition, the additional time students will have to pursue personal interests, which is beneficial as it decreases their stress and prevents burnout (College of Business, 2023). There are numerous examples which prove that AI can be used by students to accomplish some achievements in a very short period of time. One example, according to reports, MIT students have managed to create a jet engine in only four with the assistance of AI (Ornitz, 2026). It proves that AI is an effective way to increase efficiency when doing something complicated by both students and developers.

# The Richest Man In Babylon

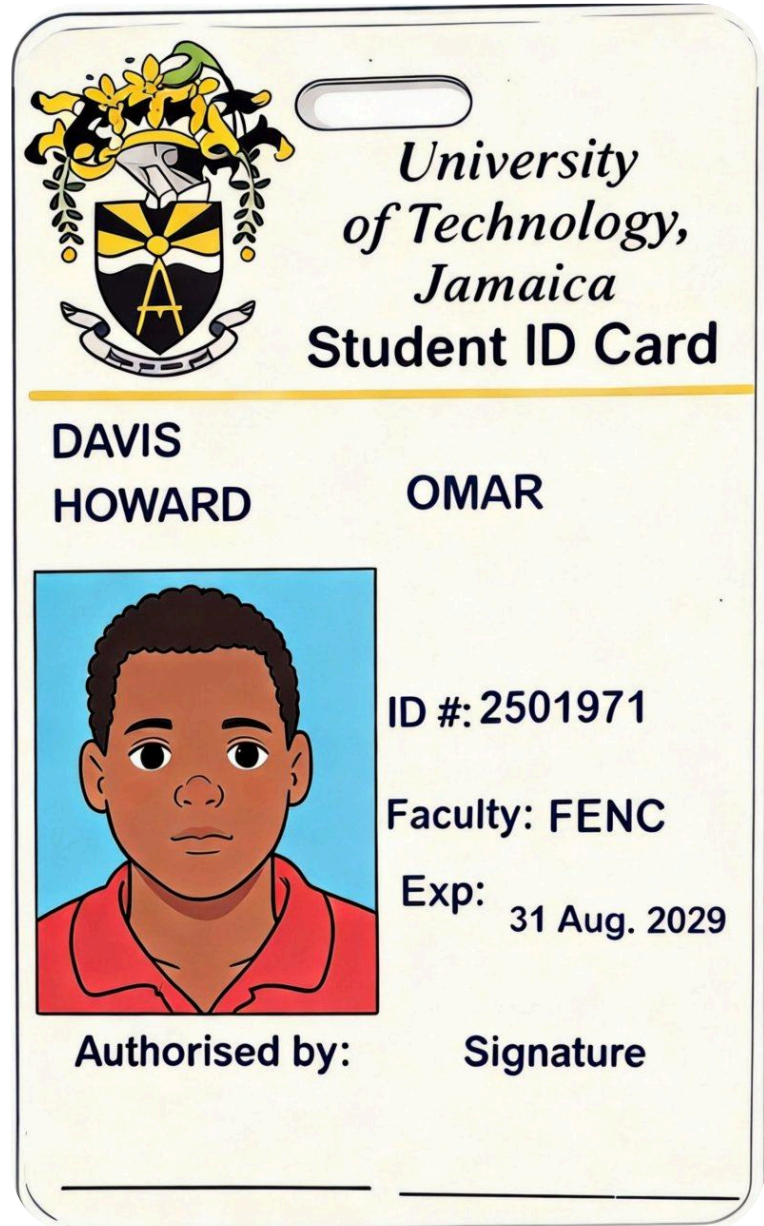

This book has presented me with a plethora of remedies for my empty wallet but the two that resonated with me the most out of the seven cures, are cure 1 and 2 because they highlight the importance of shifting one's mind from passively spending to strategically. Someone I can start with diverting a portion of their income, into savings or as Arkhad would say “into one's purse” but without proper control as quickly as the purse fattens it can also lose all its content. Proper control is essential as it ensures that your purse grows passively while allocating expenses towards items that are necessary for survival.

I am very curious about the programming world and enjoy learning about new technology. Currently focusing is Android development using Kotlin and the Jetpack Compose framework. My curiosity motivates me to explore new programming concepts, experiment with different ideas and in return the knowledge I gain to elsewhere.

Academically, knowledge I gain from my explorations can use projects such as in this one where I applied some UI design concepts to build the website.

Always try to challenge myself either by experimenting with concepts that may initially seem difficult or diving first head into a new world because challenges act as a means to improve my skills. This mindset has positively impacted my academic life by helping me become more persistent when I encounter difficult assignments.
